

Request for Flood Evidence

Barton Parish Council are working with the Environment Agency to try to secure some funding for flood warning and flood relief measures in the Parish and we'd like to provide a package of information to the EA about the extent and impact of previous flood events in and around the village.

Whilst any images of older flood events would be interesting, we're chiefly looking at flooding since the Storm Dennis event in February 2020 which affected 74 properties in the village with flood water getting into properties from the outside or drains backing up internally.

If anyone has any of the following that they would be willing to share, would you please contact us so that we can pass the information on:

- a) Any drone footage*
- b) Any ground level video*
- c) Any still photos.*

*Any information passed to us would be covered by the General Data Protection Regulation and would be used **ONLY** for the basis of supply to the Environment Agency and Barton Parish Council for mapping flood locations and extents and assessing the impact of flooding from all sources e.g.. direct flooding from water courses, flooding from overland flow (e.g. off fields, and farmland), surface water flow on or from highways, flooding from blocked or surcharged drainage systems.*

***NO** information provided will be made public on any digital or non-digital platform unless there is express prior permission from the data owner and there is good public-interest reason for doing so, e.g. to alert people to a particular flood risk hazard at any location within the Parish.*

If anyone is able to help us reduce flood risk in the Parish by providing information then would you please contact us at clerk@bartonunderneedwood-pc.gov.uk or for more information contact either Cllr Ed Sharkey edsharkey@bartonunderneedwood-pc.gov.uk or Cllr Derek Lord dereklord.bpc@gmail.com

Thank you ☺

Barton Parish Council
